ABSTRACT

Bunda Umar Salon is a salon for Muslim women that offers a complete top to toe beauty services. Bunda Umar Salon is always committed to providing quality service to its customers. However, some customers still complain about the disappointing service provided by Bunda Umar Salon employees.

The absence of written SOPs in operational activities has resulted in the Bunda Umar Salon being unable to meet acceptable service quality standards. To produce satisfying services for customers, a salon needs to have the right standard operating procedures. This study aims to design SOPs following the circumstances of Bunda Umar Salon and its implementation plan. This research used observations and literature reviews to determine the most appropriate method in designing Bunda Umar Salon's SOPs.

The SOPs design begins with determining the service critical points in order to define the priority SOPs. After that, a knowledge conversion process is carried out based on Nonaka's SECI Model, a well-known knowledge conversion theory. Knowledge conversion is carried out to convert tacit knowledge, an unwritten understanding of how to perform service procedures owned by all Bunda Umar Salon employees, into an explicit knowledge form. The acquired explicit knowledge is then compiled into a written SOP format and then tested in the field. The SOP trial process was carried out to find out feedback from employees and customers. The contents of the SOP were then revised based on those feedbacks. The SOP implementation plan is made with a strategy to address employee resistance to change.

The SOPs, which contain the fixed procedures best practice for Bunda Umar Salon's services, have proven to bring about a positive change. SOPs make it easier for employees to understand the flow of work and increase their discipline at work. Employees who work according to the SOPs provide satisfying service for customers. The SOPs also indirectly affects the increase of Bunda Umar Salon revenue.

ABSTRAK

Salon Bunda Umar adalah salon khusus wanita muslim yang menawarkan pelayanan kecantikan lengkap dari ujung kepala sampai ujung kaki. Salon Bunda Umar selalu berkomitmen untuk memberikan pelayanan yang berkualitas bagi para pelanggannya. Namun sayangnya, masih ada beberapa pelanggan yang mengeluhkan pelayanan mengecewakan dari karyawan Bunda Umar Salon.

Tidak adanya standar operasional prosedur (SOP) tertulis menjadi penyebab utama Salon Bunda Umar tidak dapat memberikan standar pelayanan yang berkualitas. Padahal untuk memberikan pelayanan yang memuaskan pelanggan, penting bagi sebuah salon kecantikan untuk memiliki SOP yang benar. Penelitian ini bertujuan untuk merancang SOP yang sesuai dengan keadaan Salon Bunda Umar dan rencana implementasinya. Metode penelitian yang dilakukan adalah dengan melakukan observasi dan studi Pustaka untuk menentukan metode perancangan SOP Salon Bunda Umar yang paling tepat.

Proses perancangan SOP Bunda Umar Salon diawali dengan menentukan titik pelayanan kritis untuk menentukan prosedur layanan yang menjadi prioritas pembuatan SOP. Setelah itu dilakukan proses konversi pengetahuan berdasarkan *Model SECI Nonaka*, sebuah teori konversi pengetahuan yang terkenal. Proses konversi pengetahuan dilakukan untuk mengubah pengetahuan *tacit*, yaitu pemahaman tidak tertulis tentang cara melakukan prosedur pelayanan yang telah dimiliki oleh seluruh karyawan Salon Bunda Umar, menjadi bentuk pengetahuan eksplisit. Pengetahuan eksplisit yang didapat lalu disusun ke dalam format SOP tertulis untuk kemudian diuji coba di lapangan. Proses uji coba SOP dilakukan untuk mengetahui tanggapan dari karyawan dan pelanggan. Isi SOP kemudian direvisi berdasarkan tanggapan tersebut. Rencana implementasi pelaksanaan SOP dibuat dengan strategi untuk mereduksi resistensi karyawan terhadap perubahan.

SOP yang berisi prosedur tetap terbaik bagi pelayanan Salon Bunda Umar terbukti telah membawa perubahan yang positif. SOP tertulis mempermudah para karyawan untuk secara lebih jelas memahami alur pekerjaan yang harus dilakukan dan meningkatkan kedisiplinan mereka. Karyawan yang bekerja sesuai SOP akan memberikan pelayanan yang memuaskan bagi pelanggan. Pelaksanaan SOP juga secara tidak langsung berpengaruh terhadap peningkatan pendapatan Bunda Umar Salon.

Keywords: *jasa salon kecantikan, konversi pengetahuan, model SECI Nonaka, standar operasional prosedur (SOP), resistensi karyawan terhadap perubahan.*

FOREWORD

Alhamdulillah, the author would like to say for this final project completion. The completion also signs that the author has passed an important milestone in pursuing the dream of becoming a successful entrepreneur. The author would like to express profound gratitude to:

1. Allah SWT for the health and thinking ability given to the author so that the author can complete this final project properly
2. Author's final project advisor, Ir. C.O. Budi Permadi Iskandar, MSP., who has guided the author with all his expertise, kindness, and patience from the beginning to the end of the final project preparation process. The author gets a lot of new useful knowledges for future business
3. Author's parents who have provided the opportunity and support during author's study process at MBA ITB
4. Husband and beloved children who have been patiently willing to share their time while the author is studying the master's degree
5. All CCE MBA ITB lecturers and CCE 61 friends for all the knowledge and experience that the author got during the master program.

Bandung, February 2021

CHAPTER 1 INTRODUCTION

1.1 Background

Caring for self-beauty in a beauty salon has become necessary for most women to improve their self-esthetics or relax their bodies after having a busy day. One of factor determines a woman in choosing a beauty salon is the salon's quality of service. Salons that provide satisfying beauty services will be the customer's top choice.

To produce satisfying services for customers, a salon needs to have the right standard operating procedures. Standard operating procedures are written documents that contain a collection of standardize techniques for carrying out an activity based on chronological order. For companies engaged in services, SOPs are made primarily to establish the standardization of services provided to customers.

All employees who work in a company need to make SOP their main guideline when doing the ordered work. At Bunda Umar Salon - a salon specifically for Muslim women, which is the main object of this research, all employees need to follow the company's standard procedures when providing beauty services to customers. However, during its ten years of existence, Bunda Umar Salon never had a written SOP. Beauty treatments carried out by employees are only based on standard procedures which were conveyed verbally to them during the initial training.

The absence of written SOPs in operational activities makes it difficult for Bunda Umar Salon management to control the standard service quality. Customers who feel that they receive substandard service will express their disappointment in customer complaints—besides, PT. Bunda Umar Sharia Group as the owner of Bunda Umar Salon, has plans to open several more branches in other places, but the absence of SOPs as the quality control essential tool is an obstacle to the plan. Therefore, Bunda Umar Salon's management needs to design the SOP that all employees must perform to enforce quality service standards and a system that can make Bunda Umar Salon operations' quality feasible to operate on a more extensive business scale.

1.2 Company Profile

Bunda Umar Salon is a salon specifically for Muslim woman located in Intan Business Center (IBC) Shopping Block No. A25, Garut Regency, West Java. Established on March 14th,

2010, Bunda Umar is the first Muslimah salon in Garut. Bunda Umar uses Islamic sharia as its business core value.

Figure 1.1. Bunda Umar Salon Logo (Author, 2021)

Bunda Umar Salon targets Muslim women as their main potential customers. Bunda Umar Salon strives to give extra comfort and privacy, especially for Muslim women. The salon is restricted to women only which means no men can enter the salon during operating hours. Bunda Umar Salon only uses halal products for the service and doesn't provide beauty services against Islamic sharia, such as hair extension, waxing, and eyebrow embroidery.

On the first of its operation, Bunda Umar runs only by five therapists, but now there are twenty therapists with different specialty skills. Bunda Umar Salon building consists of 3 stories. In the 1st floor, there are a receptionist room, lobby, and hair therapy room. The 2nd floor has a facial treatment room containing four facial beds and two spa rooms. In the 3rd floor, there are a menipedicure room, two spa rooms, a sauna room, and a praying room.

1.2.1 Vision and Mission

The vision of Bunda Umar Salon is to be the most extensive *Muslimah*-only salon brand in Indonesia that provides professional services with premium quality by upholding Islamic Sharia's value as its core business foundation.

The mission of Bunda Umar Salon are :

- Providing a comfortable and stimulating atmosphere where customers will be able to relax, both their bodies and minds, and reconnect with their utmost goals amid their daily lives, through experience various services - from hair, body, to facial treatments
- Promoting Islamic values as life guidance for *Muslimah* in terms of beauty and health
- Encouraging and facilitating women to have productive expertise, as a support for women empowerment movement in terms of work accessibility, welfare, and skills.

1.2.2 Business Scope

Salon Bunda Umar tries to reach all Muslim women living in the Garut Regency area. Since it is located in the middle of the Garut Kota area, customers who come are dominated by women who live in Garut Kota District and the closest sub-districts around it, namely Tarogong Kidul, Tarogong Kaler, Karangpawitan, Wanaraja, and Bayongbong Districts.

1.2.3 Company Product

Bunda Umar Salon service is relatively complete from hair to toe. Below is a menu of treatments offered by Bunda Umar Salon.

- a. Hair Treatment: hair cutting, hair wash, hair straightening, blow dry, hair mask, cream bath, hair treatment, hair spa, halal hair colouring, and hair smoothing.
- b. Face Treatment: facial, facial acupressure, and eye treatment.
- c. Body Treatment: body spa, body massage, scrubbing, *ratus*, manicure, and pedicure.
- d. Others: Pre-marital treatment

Figure 1.2. Bunda Umar Salon Hair Treatment Room (Author, 2021)

Figure 1.3. Bunda Umar Salon Facial Treatment Room (Author, 2021)

Figure 1.4. A Customer is Having a Hair Creambath in Bunda Umar Salon (Author, 2021)

1.2.4 Organizational Structure

Bunda Umar Salon is a business unit under the auspices of PT. Bunda Umar Sharia Group. The organizational structure of Bunda Umar Salon is described below.

Figure 1.5. Bunda Umar Salon Organizational Structure (Author, 2021)

Based on the structure above, the job descriptions are:

a. Board of Directors

Consist of a commissioner and a president director. The board of directors are part of PT. Bunda Umar Sharia Group which acts as a determinant of the entire direction of the company's activities and the main decision maker.

b. Management

Management consists of:

- a) Operational manager, responsible for managing all operational activities such as distribution of therapist duties, manage customer queues, supervise operational activities, and on-site problem solver.
 - b) Financial manager, responsible for managing all company's financial resources. Financial manager collects, interprets, and reviews financial information, and also produce financial reports related to budgets and expense.
 - c) Human resources manager, responsible for producing qualified human resources by creating employee performance management system.
 - d) Marketing manager, responsible to create all marketing strategies and activities. The marketing manager has a duty in research and analyses market trends in the salon field, competitor offerings, demographics and other information that affects marketing strategies; manage social media and websites of the company; and becoming a company representative with external parties and customers related to branding & marketing businesses.
- c. Head of Salon
- Head of salon doing the job as:
- the main information mediator between management and employees, and vice versa
 - the main person in charge of all activities and salon's employee performance.
- d. Cashier Chief
- A cashier chief is responsible for all activities and employees related to receptionist activities and financial transactions that occur at the salon.
- e. Floor Chief
- Since Bunda Umar Salon is a three story building, so there are three floor chiefs responsible for room cleanliness and treatment equipment condition on each floor.
- f. Warehouse Chief
- A warehouse chief responsible for managing inventory in-and-out activities, ordering new supplies, and maintaining suitable inventory levels.

1.2.5 Business Process

Figure 1.6. Bunda Umar Salon Service Process (Author, 2021)

The service begins with a reservation process, which allows customers to book an appointment prior to their arrival. This could be done by contacting Bunda Umar Salon service via WhatsApp chat. The reservation could prevent customers from waiting too long in the queue. Then when customers arrive, they need to select the menu provided in the menu book placed on the reception table. After that, they have to wait 5-10 minutes until their therapist picks them up to the treatment room. The treatment process duration varies from 30 - 120 minutes for every treatment. After the treatment finishes, customers go to the cashier table to pay for the bill.

1.3 Business Issues

Having 3 branches in the next 5 years is one of the Bunda Umar Salon's KPI (key performance indicator) created by management. Therefore, PT. BUSG needs to ensure Bunda Umar Salon operations' quality is feasible to operate on a more extensive business scale. Moreover, in the future, the emergence of new competitors in the same field can be a severe threat to Bunda Umar Salon's existence. Bunda Umar Salon, currently the only salon specifically for Muslim women in Garut Regency, has the opportunity to become a top of mind woman salon if it always maintains its service quality.

Keeping the customer satisfaction rate above 95% is also the Bunda Umar's Salon services KPI. Providing high-quality services can lead to customer satisfaction. Quality service depends on how all the Bunda Umar Salon employees can carry out beauty treatment procedures according to company standards.

Unfortunately, there are no expected quality and service standards in Bunda Umar Salon for ten years since its establishment, and this problem leads to customer dissatisfaction in the form

of customer complaints. Management concluded that the absence of written SOPs was the main root cause of the service quality problems.

1.4 Research Questions

- a. How to design the right SOPs to be applied at Bunda Umar's Salon?
- b. How will the salon employees react to the SOPs?
- c. What management action plan should be executed to enforce the SOPs?

1.5 Research Objectives

- a. To design the SOP's of Bunda Umar Salon
- b. To collect employee reactions to the SOP's
- c. To develop the SOP's enforcement implementation plan.

1.6 Research Limitation

This research will only focus on Bunda Umar Salon's critical point service SOP design, employee's reaction to the SOP, and management's plan to enforce the SOP observed from October to December 2020.

1.7 Systematical Writing

This final project consists of four chapter namely Introduction, Business Issue Exploration, Business Solution, Conclusion and Implementation. Each chapter has subchapters described as follows.

- Chapter I: Introduction. This chapter will explain the research's background, the company's profile of the study object, the concerned business problem, research questions, research objectives, research limitation, and the systematical writing.
- Chapter II: Business Issue Exploration. This chapter will explain supporting literature review, conceptual framework, and data collection method.
- Chapter III: Business Solution. This chapter will explain solutions for issue described in previous chapter.
- Chapter IV: Implementation Plan. This chapter will explain the implementation of SOP enforcement plan in Bunda Umar Salon.

CHAPTER 2 BUSINESS ISSUE EXPLORATION

2.1 Literature Review

2.1.1 Standard Operating Procedure

Standard Operating Procedure (SOP) is a written document that regulates the standardized stages of a permanent, routine, and unchanging work procedure (Budiharjo, 2014). According to United States Environmental Protection Agency (2007), the development and use of SOPs are an integral part of a successful quality system as it provides individuals with the information to perform a job properly and facilitates consistency in the quality and integrity of a product or end-result.

Supartono (2016) explained that the SOP-making cycle consists of several processes described as follows. The first process is writing SOPs. Writing SOPs begins by listing all activities that must be carried out to meet the organization's service standards. SOP writing can be done individually or in groups. Each organization has a unique character under the institutional conditions and resources. Therefore, writing SOPs must be specified following the organization's characteristics in which the SOP is implemented, but still follow a specific format. There are many SOP writing format choices; every organization needs to choose one easy, concise format but quality.

The second process is the SOP review. In this process, the written SOP needs to be reviewed by the reviewer, who is assigned to assess the SOP's feasibility. Reviewers can come from within or outside the organization. The assessment can be carried out in a meeting forum by inviting the SOP compilers and the reviewers. SOP feasibility assessment focuses on three essential things, namely the format, language, and content of the SOP. After completing the review and correcting any possible errors, then the draft SOP is tested.

The trial process aims to ensure that the SOPs created can be implemented safely, comfortably, and produce quality services or products. SOP trial activities are carried out similarly to actual service activities but differ in the subject matter. The service subject is voluntary and not yet destined for public service. Pilot activities should be carried out under expert supervision. Record the results in the minutes of the trial SOP draft. If the trial succeeds in providing quality, safe, and comfortable results, the SOP draft can be approved as an SOP.

The next process is the approval or authorization. Authorization is the SOP draft's approval to become an SOP as a service standard, evidenced by the issuance of a decision letter by the applicable administrative provisions. Authorization is carried out by officials who have the authority and responsibility in the organization. After authorization, it then goes into the determination process.

The process of establishing SOPs aims to provide a legal umbrella for SOPs to be implemented in public service activities. Implementers and service recipients are obliged to follow the stipulated SOP.

The SOP that has been determined must then be documented under the applicable regulations. The originals are stored in the archive unit in hardware and software, three copies each. Original documents must be properly maintained and periodically checked for integrity. Original documents can be reproduced as needed and stored in the integral unit.

The next process is the publication, but this process is only mandatory for state public service providers. In this process, the SOP document must be converted into public material. Several forms of public material that must be created include public articles, brochures, posters, books, pocketbooks, standing banners, running text, etc.

The established SOPs then enter the socialization process to administrative staff to be familiar with, understand, and follow the applicable regulations therein. This socialization is conveyed directly in various forums or means in the organization, for example, morning reports, weekly reports, organizational meetings, or events. SOP socialization in general, while specific delivery is carried out through training activities.

Implementers must attend SOP-based training, which means using SOPs as the primary training material. In the training process, SOPs need to be explained, understood, and trained to implement staff to understand the service's essential things. Besides, in this training, the participants will practice (simulate) work on services according to the SOP, with the aim that later they can work steadily (firmly) without feeling awkward, afraid of being wrong, and not endangering service recipients. Through this training, the staff will work according to the SOP and provide the best service for the community. This training will strengthen the organization's system and work culture to work based on a system not based on individuals (personal opinion). Finally, organizational services will take place in a systemic, sustainable, and "eternal" manner.

The reality of service is dynamic since it is influenced by many variables such as consumer demands, organizational changes, budget availability, tool innovation, technological advances, software changes, quality of human resources, etc. Service providers must respond to the demands of these changes by making some adjustments or revised SOP. SOP revisions can be made if necessary to improve service quality and increase service recipients' satisfaction.

In brief, we can see the SOP creation cycle in the form of a diagram below.

Figure 2.1. SOP Creation Cycle (Supartono, 2016)

2.1.2 Knowledge Conversion

Knowledge as a resource provides a competitive edge to firms and ensures organizational success (Kainth & Vij, 2017). According to Nonaka (1994), organizational knowledge is created through a continuous dialogue between tacit and explicit knowledge. Tacit knowledge is component of knowledge that is widely held by individuals but not able to be readily expressed. It is expertise, skill, and ‘know how’, as opposed to codified knowledge (Dampney et al., 2002). The tacit knowledge can be gained mostly from experiences, from other people, as for instance, riding a bike or speaking a language (Keglovits, 2013).

The concept of “tacit knowledge” is a cornerstone in organizational knowledge creation theory and covers knowledge that is unarticulated and tied to the senses, movement skills, physical experiences, intuition, or implicit rules of thumb. Tacit knowledge differs from “explicit

knowledge” that is uttered and captured in drawings and writing (Nonaka & von Krogh, 2009). Explicit knowledge can be expressed in words and numbers and shared in kind of knowledge can be readily transmitted between individuals formally and systematically (Nonaka & Konno, 1998).

The concept of “knowledge conversion” explains how tacit and explicit knowledge interact along a continuum (Nonaka & von Krogh, 2009). The interactions between these kinds of knowledge lead to the creation of new knowledge (Nonaka & Konno, 1998). This research's knowledge conversion method refers to Nonaka's SECI model, a well-known technique to convert tacit knowledge into explicit knowledge.

2.1.2.1 Nonaka's SECI Model

In Nonaka's knowledge spiral theory, four basic patterns for creating knowledge in any organization are suggested: socialization, externalization, combination and internalization (Huang & Wang, 2002). The SECI model describes a dynamic process in which explicit and tacit knowledge are exchanged and transformed (Nonaka & Konno, 1998). Nonaka's SECI can be described as shown in the figure below.

Figure 2.2 . Nonaka's SECI Model (Kainth & Viji, 2007, adapted from Nonaka & Konno, 1998)

Socialization. Socialization involves the sharing of tacit knowledge between individuals through physical proximity. Tacit knowledge is exchanged through joint activities – such as being together, spending time, living in the same environment – rather than through written or verbal instructions. The process of transferring one's ideas or images directly to colleagues or subordinates means to share personal knowledge and create a common place.

Externalization. Externalization requires the expression of tacit knowledge and its translation into comprehensible forms that others can understand. The unspoken understanding is articulated into explicit knowledge form by involving techniques that help express one's ideas or images as words, concepts, figurative language, and visuals. In this process, the tacit knowledge of experts is translated into a readily understandable form.

Combination. Combination involves the conversion of explicit knowledge into more complex sets of explicit knowledge. The key issues are communication and diffusion process and the systemization of knowledge. The combination phase relies on three approaches:

- capturing and integrating new explicit knowledge
- transferring the knowledge directly to disseminate the explicit knowledge
- editing or processing the explicit knowledge into more usable documents (e.g., plans, reports, data).

Internalization. The internalization of newly created knowledge is the conversion of explicit knowledge into the organization's tacit knowledge. The explicit knowledge has to be embodied in all the people's actions and practices in the organization.

(Nonaka & Konno, 1998)

2.1.3 Employee Resistance to Change

In this modern era, everything will change because change is everywhere, including in an organization (Darmawan & Azizah, 2019). Changes are also mainly made by business organizations, which are always struggling with intense competition. Every small or medium business must be able to make changes quickly to maintain its competitiveness since the core competitiveness is the capability of a company to survive while facing intense competition (Yuh-Shy, 1999).

Not everyone gives the same reaction to a change, in this case, employees' reaction to their company organizational changes. In the face of change, some people will accept, while some

people will resist. According to Yuh-Shy (1999) to what degree change is accepted depends on the specific change and individual conditions and perceptions. Furthermore, acceptance or rejection often depends on the personal loss or gain that will result from the change in the tangible areas of, for example, money, visibility, working conditions, authority, or responsibility, as well as from intangibles including status, recognition, feeling of importance, and security.

Employee resistance to change is employee's negative attitude or counterproductive behaviors toward the organizational change (Grama & Todericiu, 2016). Erwin & Garman (2009) described resistance to change is often cited as a reason for difficulties in implementing and the failure of change initiatives. Employees who were inclined to resist changes were more distraught by the change and reported an increased difficulty to work effectively (Oreg, 2003). People resist change because changes are seen as a threat to them, their status and financial rewards. Resistance to change is considered to be one of the key factors in failing on the success of changes in business (Karaxha, 2019).

2.2 Conceptual Framework

Conceptual framework refers to specific ideas a researcher utilizes in his/her study based on the concepts, which are the main study variables. It can also be described as an adaptation of a model in an existing theory that a researcher adapts to suit the research purpose. The aim of making a conceptual framework is to make research findings more meaningful, acceptable to the theoretical construct in the research field, and ensures generalizability (Adom et al., 2018).

This research begins with a discussion of management issues as the primary research object. Chapter 1 revealed that the absence of written SOPs was the root cause of the Bunda Umar Salon service quality problems, so that designing the SOP and its implementation plan became the main objectives of this study.

SOPs are written documents that contain instructions on how to carry out a procedure correctly. In order to determine the instructions that produce the correct procedure, knowledge is needed. The Concise Oxford Dictionary (1998) defines knowledge as awareness or familiarity gained by experience (of a person, fact, or thing). Therefore, the knowledge possessed by the owner and all employees of Bunda Umar Salon is the primary basis for making the required SOPs.

Based on this research context, there is a relationship between SOPs and the knowledge creation process. Nonaka and Takeuchi (1995) in Chou and Tsai (2003) described that the key to

knowledge creation lies in the mobilization and conversion of tacit knowledge into explicit knowledge. The knowledge creation process is a process that needs to be done first before the SOP design process to convert unwritten (tacit) knowledge into written (explicit) knowledge so that the knowledge can be written in SOP format. SOP is a written document containing fixed service procedures, which according to Buchori (2019), is needed to produce a good quality system and consistent technique. For more than ten years of the Bunda Umar Salon establishment, all employees perform treatment procedures only based on their unwritten shared knowledge sourced from their senior coworkers. Therefore, it is necessary to convert workers' experience in tacit knowledge into explicit knowledge before the SOP writing process.

The researchers used Nonaka's SECI knowledge conversion mode as the primary theoretical basis to be able to convert tacit knowledge into explicit knowledge. After that, the researchers made direct observations in the field to determine the critical service points that were vulnerable to customer complaints.

Observations will provide a more conical picture of what SOPs Bunda Umar Salon needs the most. After determining the SOP category to be made, the researcher does the knowledge conversion process. The knowledge conversion process is carried out by collecting tacit knowledge sourced from the directors of PT. BUSG also acts as Bunda Umar Salon's owner, who makes and understands all salon operational procedures. The collected tacit knowledge is converted into explicit knowledge and then made into several general process categories. This process is carried out iteratively, meaning that it could be repeated sequentially to ensure the tacit knowledge is properly articulated.

After tacit knowledge has been converted into explicit knowledge in a form that is easier for many people to understand, the researchers begin the SOP design process, starting with writing SOPs based on this explicit knowledge. The written SOP is then tested for its accuracy and feasibility by asking employees to practice the SOP with customers. After the trial process, the researcher interviewed employees and customers who were trial participants to get feedback about the SOP. The input obtained becomes material for making the final revision of the SOP.

The revised SOP is ready to be implemented by all employees of Bunda Umar Salon. Researchers need to design the SOPs enforcement implementation plan by considering strategies that can address employee resistance to change. The study process conducted in this research is shown in the figure 2.3.

Figure 2.3. Thesis Study Process (Author, 2021)

2.3 Research Methodology

This research uses descriptive exploratory qualitative research methods. According to Arikunto (2002) in Mabrudy (2013), descriptive research analyzes and presents data systemically so that it is easier to understand, while exploratory research is a type of research to find something new in the form of grouping a fact. Descriptive exploratory research does not aim to test hypotheses but provide a description of a phenomenon's state.

2.4 Data Collection Method

This study uses primary data and secondary data to collect all the necessary information. Primary data were obtained by conducting observations and interviews, while secondary data were obtained using literature reviews from internal and public data.

2.4.1 Primary Data

2.4.1.1 Observation

Observation is used in the social sciences to collect data about people, processes, and cultures (Kawulich, 2012). A scientific observation method is the technique of watch, evaluate, draw conclusions, and make comments on interactions and relations carried out systematically, purposefully, and on scientific grounds (Ciesielska et al., 2018).

This research uses a non-participant observation method, which according to Ciesielska et al. (2018), means that the researcher tries to understand the world, relationships, and interactions in a new way, without prevalent categorizations and evaluations. Observations are made by observing all service processes that occur during Bunda Umar Salon's operational hours and noting important things related to standardization of procedures. The researcher also observed the incoming customer complaint data as complementary information that could support the observation process.

The aim of this process is to observe the salon services and note some of its critical points that can lead to customer dissatisfaction issues. The observations can provide data that shows which service sector is a priority for the SOP design.

2.4.1.2 Interview

The interviews that will be conducted are semi-structured, which involve several open-ended questions based on the topic areas that the researcher wants to cover. The open-ended nature of the questions posed defines the topic under investigation but provides opportunities for both

interviewer and interviewee to discuss some topics in more detail. Preparation for semi-structured interviews includes drawing up a “topic guide,” a list of topics the interviewer wishes to discuss (Hancock et al., 2009).

Researcher conducts semi-structured interviews with several employees and experimental customers to get feedback about the SOPs that have been made after completing the trial process. Table 2.1 shows the interview topic guide used in the study.

Table 2.1. Interview Topic Guide

Interviewee	Topics		Prompts
Employees	Introduction and background	Introductions	Who we are and aims of study. Check length of interview.
	Content of SOP	Similarity to the pre-SOP understanding	How similar are the tested SOPs to your previous understanding of this procedure?
		Feasibility	How feasible is this SOP for you to do at work?
			Does this SOP make it easier for you to do your job?
		Improvement	Is there anything that needs to be improved in this SOP?
Customers	Introduction and background	Introductions	Who we are and aims of study. Check length of interview.
	Employee performance	Satisfaction	How satisfied are you with the services provided by employees?

Interviewee	Topics		Prompts
			How was the quality of service procedures you got at your visit today?
		Improvement	Is there anything that needs to be improved from the service?

2.4.2 Secondary Data

2.4.2.1 Internal Data

Internal data reviewed in this study is customer complaint data received by Bunda Umar Salon management from 2019-2020.

2.4.2.2 Public Data

Public data reviewed in this study are SOP data of other companies, especially similar salons, which can be used as a benchmark for researchers to design SOPs for Bunda Umar Salon.

CHAPTER 3 BUSINESS SOLUTION

3.1 Determine Service Critical Point

According to Supartono (2016), writing SOPs needs to be started by listing what activities must be carried out to meet organizational service standards. According to Parasuraman et al. (1985), management should understand which features a service must have to meet the customer needs and what levels of those features perform to deliver high-quality service. Bunda Umar Salon's owner thinks that her employees' service meets the service standard if there are no customer complaints. Therefore, the researcher started the SOP design process by listing the service critical point, which means what service activities were at risk of causing customer complaints. The research uses a direct observation method to determine the critical point. Service critical points obtained after the observation process are verified by comparing the observation results with customer complaint data.

3.1.1 Service Critical Point in Lobby Area

Bunda Umar Salon lobby area includes a reception service area and a public waiting room, which means that the customers and their companions can wait in this room. The observations show that employee service at the reception is the first critical service point that determines customer satisfaction. Here employees are required to understand and explain all the services offered to customers. If the employee cannot provide the right treatment recommendations for the customer's condition, the customer will not be satisfied with the services provided. Employees at the reception desk must also understand and offer available promos or complement treatments that match the customer's primary treatment to increase Bunda Umar Salon's sales.

The second critical point is when a customer has to wait, employees in the lobby area need to explain how long customers should wait and, if possible, to explain the circumstances that make the customer need to wait. Customers who wait too long for no apparent reason will feel angry with the services.

3.1.2 Service Critical Point in Treatment Area

Bunda Umar Salon's treatment room includes all rooms used by the customer during the treatment. Bunda Umar Salon has two types of treatment rooms, namely closed and open treatment rooms. A closed treatment room is a private treatment room and is only used by one customer and one therapist during the treatment. Included in the closed treatment room is the spa room and the

ratus room. On the other hand, an open treatment room is a treatment room shared by more than one customer. Bunda Umar Salon's open treatment room consists of a hair treatment room consisting of eight service chairs, a facial room comprised of four service mattresses, and a nail treatment room consisting of four service chairs.

In all types of treatment rooms, the critical service points found were the duration and sequence of treatment procedures. For example, the duration of massage that is too short can be a customer complaint. Customers who often have beauty treatment frequently can also identify a skipped or not-in-place procedure so that this matter needs to be the employee's attention.

In an open treatment room, customers can see the activities carried out by employees other than the therapists who serve them. The attitude shown by all employees around the area that is visible to customers is a critical service point. Customers will feel that employees are rude if they are still engrossed in chatting or playing gadgets when customers pass in front of them. Based on customer complaint data, some customers feel that non-duty employees around them are chatting or laughing too hard, disturbing their comfort. The observation also shows that some employees waiting for treatment sat on the stairs, thus distressing customers' access road, especially the second floor.

All employees must carry out the cleaning procedure for each treatment station is also the next service critical point. A dirty treatment station will cause inconvenience to customers. Also, during the Covid-19 pandemic, serving customers with the correct health protocol is very important for all employees and customers of Bunda Umar Salon. The overall critical service points of Bunda Umar Salon found during the study are summarized in the table below.

Table 3.1. Bunda Umar Salon's Service Critical Point

Location	Service Critical Point	Potential Mistake	Employee in Charge
Lobby Area			
Receptionist desk	New arrival customer service at reception desk	The employee did not explain the treatment offered properly	Receptionist
		The employee is unable to recommend the most suitable treatment based on the customer's condition	Receptionist

Location	Service Critical Point	Potential Mistake	Employee in Charge
Receptionist desk	New arrival customer service at reception desk	The employee did not offer promo available	Receptionist
Waiting room	Ask the customer to wait for the treatment	The customer feels angry for waiting too long	Receptionist
Treatment Area			
Treatment Room	Beauty treatment procedure	The employee performs shorter procedure duration than prescribed standards	Therapist on duty
		The employee skips one or more procedural stages	Therapist on duty
	Room preparation	The employee does not clean the treatment station properly, leaving dirt that makes customers uncomfortable	All therapist
Open treatment room	Waiting for assignment	Employees make noise that disturbs customer comfort	Waiting therapists
Staircase		Employees sit in places that interfere with customer walk access	Waiting therapists
Others			
All salon area	Covid-19 Health Protocol	Employees or customers do not implement Covid-19 transmission prevention protocols	All employees

From the service description described in the table, these service processes are the most critical processes to pay attention to because they significantly affect customer satisfaction. Thus, the researcher decided to create a process standard for service processes included in the service critical point.

3.2 Convert Tacit Knowledge into Explicit Knowledge

Bunda Umar Salon is a business unit that relies on providing beauty services to customers as the primary revenue generator. However, the entire customer service process is still in the form

of undocumented employee tacit knowledge. Therefore, it is necessary to convert workers' experience in tacit knowledge into explicit knowledge. This research uses Nonaka's SECI model as the primary theoretical basis. In this section, the researcher only uses Nonaka's SECI model's three conversion processes, namely socialization, externalization, and combination. The research will discuss the internalization process in the next section. The output of knowledge conversion is in the form of best practices, which will be used as a reference in making SOPs.

3.2.1 Socialization

Socialization is an activity to capture Bunda Umar Salon's service procedures knowledge, which is still tacit knowledge. As the successor of Bunda Umar Salon's business, the researcher has held discussions with her mother as the founder of Bunda Umar Salon to find out all information regarding the correct procedure stages throughout the service process, which is included in the service critical point. To gather knowledge about beauty treatment procedures, researchers conducted interviews with two Bunda Umar Salon employees who worked the longest and knew all the beauty treatment procedures in the Bunda Umar Salon menu. The socialization process's output is to gain knowledge about the service procedures that the owner expects to be appropriately carried out by all Bunda Umar Salon employees.

3.2.2 Externalization

At the externalization stage, all tacit knowledge obtained from the socialization process is transferred to an explicit form, namely by writing notes on carrying out an operation. The resulting document is a simple record of the business process, becoming the primary data source for the combination process.

3.2.3 Combination

In the combination stage, the business process documents that have been obtained previously will be converted into more complex sets of explicit knowledge. The research will combine business process documents with other explicit knowledge obtained from literature reviews and benchmarking of competitor salon SOPs to get best practice service procedures implemented at Bunda Umar Salon.

3.3 Design the Standard Operating Procedure (SOP)

After converting tacit knowledge on service procedures included in service critical points into explicit knowledge, the next solution that needs to be done is to design the SOPs. At this stage,

documents containing explicit knowledge of Bunda Umar Salon's best practical service procedures are processed into a written SOP. Researchers made SOP designs for several service activities, as mentioned below.

- Welcoming Customers
- Receiving Customer Orders at the Reception Desk
- Welcoming Customers in the Treatment Room
- Waiting for Job Assignment
- Hair Station Preparation
- Facial Station Preparation
- Spa Station Preparation
- Menipedicure Station Preparation
- Receiving Online Reservations
- Covid-19 Transmission Prevention Operational Protocol
- Beauty Treatment Procedures

3.3.1 SOP Writing

The initial stage of the SOP design process is writing the SOP into a specified format. Wieringa et al. (1998), in Ambarwati & Triana (2012), states that there are four formats for writing SOPs as described below.

- **Simple steps.** SOP writing format for routine activities that have short process steps and do not require much decision making.
- **Hierarchical steps.** SOP writing format for routine activities with more than ten steps of the procedure but does not require many decisions.
- **Graphic steps.** The definition is the same as hierarchical steps, but in this format, the SOP is written in graphical form to simplify long processes into shorter forms.
- **Flowchart.** SOP writing format in the form of a simple graphic describes the process steps in making a decision. The flowchart format is suitable for explaining procedures that require a lot of decision making.

According to Stup (2012), management can choose various SOP writing formats, but they need to choose a writing format that is easy for employees to understand to simplify the work. The table below explains how Stup (2012) provides recommendations on choosing an SOP writing format that suits the company's needs based on several criteria.

Table 3.2. Standard Operating Procedure Format Choices and Criteria (Stup, 2012)

Many Decisions?	More than 10 Steps?	Best SOP Format
No	No	Simple Steps
No	Yes	Hierarchical or Graphic
Yes	No	Flowchart
Yes	Yes	Flowchart

Referring to the table above, the researcher used the simple steps SOP writing format because almost all service procedures are short routine procedures and do not require many decisions, except for receiving customer orders at the reception desk. When the receptionist receives a customer order, the process is quite long and requires several decisions, so it uses a flowchart format.

3.3.2 SOP Trial

At this stage, the researcher conducted a trial on the draft SOP. According to Supartono (2016), SOPs trial is needed to ensure that SOPs can be implemented comfortably and produce high-quality services. SOP trial is conducted by carrying out procedures similar to the actual service activities in the actual room the service will be performed.

After completing the writing, the draft SOP was distributed to Bunda Umar Salon's employees through a meeting. All employees were gathered, and the researchers, together with the management staff, explained the contents of the draft SOP and gave orders for employees to carry out the procedures in the SOP for the next two weeks as a form of SOP trial. Researchers made observations during the SOP trial period to ensure the trial went according to plan.

The SOP draft trial must be able to answer several essential questions. If all the questions are answered, the SOPs can be approved and implemented. The list of questions that need to be answered is as follows.

- Does the capacity and resources of the organization enable the delivery of services as stated in the SOP?
- Can the services contained in the SOP be carried out safely and comfortably?
- Can the staff of the organization carry it out quickly?
- Are the service (products) delivered in good quality?

(Supartono, 2016)

3.3.3 SOP Review

The researcher conducted interviews with eight employees and six customers each separately to find out feedback on the SOP contents after the trial period was completed. Based on the results of interviews with employees, they all thought that the procedural steps contained in the SOP draft were easy to practice in the field because they were the same as their previous tacit knowledge. They also said that written SOPs made their performance standardized, and they could also remind each other if there were employees who did not provide services according to the specified standards. Written SOPs indirectly increase their work discipline. Of all the procedures in the draft SOP, five employees suggested that the standardized gestures and sentences when greeting customers in the treatment room need to be adjusted according to the circumstances.

In the SOP draft, it is written:

- *“Terapis sudah berdiri dengan seragam dan atribut lengkap. Sambil tersenyum mengucapkan kalimat “Assalamualaikum, teteh/ibu (nama pelanggan), saya (nama terapis), terapis yang akan menangan hari ini””*
- *“Terapis yang menunggu di ruang perawatan wajib menyambut pelanggan yang lewat di depan mereka. Sambutan dilakukan dengan berdiri, menyilangkan tangan kanan ke atas, menaruh telapak tangan kanan di area dada atas kiri, tersenyum, sedikit membungkukan badan atas, dan mengucapkan “Assalamualaikum, (Ibu/Teteh)”. Setelah pelanggan berlalu, terapis dipersilakan duduk kembali.”*

The employee requested that the underlined procedure be changed in terms of sentences and movements to be more flexible to greet customers who have long been Bunda Umar Salon clients. The draft SOP procedures make long-time customers awkward, and customers feel that employees do not need to greet them too formally because they already know each other well.

In terms of practicing SOPs in the field during the trial period, from the results of the interviews, it was found that some employees were still difficult to carry out procedures according to the SOP, especially in the section on introducing themselves to customers and their attitudes when waiting for treatment. Researchers received reports from respondents that their senior co-workers often forgot to carry out guest welcoming procedures. The SOP also states a prohibition for employees to wait on the stairs, but there are still some employees sitting there in the field. This finding is evidence of employee resistance to change so that in preparing implementation plans, researchers need to adopt strategies to reduce this resistance.

From the customer's point of view, the six customers interviewed agreed that the service they received during their last visit to Bunda Umar Salon was satisfactory. This result shows that the procedures in the draft SOP are capable of producing quality services. However, when entering the treatment area, a customer reported that she was a little confused about where to go next because they did not provide clear directions. The procedure for directing customers when entering the treatment area is already stated, so this is a sign that there are still employees who have not carried out the service procedures according to the SOP.

Feedback regarding the draft SOP submitted by each interview respondent is summarized in the table below.

Table 3.3. Post-Trial Bunda Umar Salon Employee Feedbacks

No.	Employee Name	Age (Years)	Length of Work	Position	Feedback about The SOPs
1.	Ita	49	9 years	Chief of Salon, Therapist	The procedures in the SOPs are easy to practice and in accordance with previous understandings. But there are still employees who do massage for less than the recommended duration.
2.	Mega	32	8 years	Therapist	SOPs are easy to do, but the welcoming procedure is awkward when dealing with known customers and since the waiting area is limited so it is difficult to find a seat other than on the stairs.
3.	Pupah	29	9 years	Therapist	The format of the SOP is clear, and the procedures in it are also easy to do. Management needs to remind employees to follow the SOP frequently.

No.	Employee Name	Age (Years)	Length of Work	Position	Feedback about The SOPs
4.	Sri	34	10 years	Therapist	The contents in the draft SOP are following the procedures that were usually carried out before.
5.	Melin	27	3 months	Hair stylist	The draft SOP procedures are easy to do and not too rigid, and the contents are not much different from the salon where she worked in the past. However, some seniors are still awkward to introduce themselves according to the SOP, so it seems that management needs to continue to support employees to familiarize themselves with SOPs.
6.	Agung	51	9 years	Hair stylist	The draft SOP document is easy to understand but may need adjustments in the customer greeting procedure because it feels awkward.
7.	Nadia	21	3 years	Chief of cashier / receptionist, therapist	The draft SOP procedure is easy to do, but there are still some colleagues who are awkward to greet the customer according to the SOP.
8.	Ema	47	8 years	Chief of hair treatment room, therapist	It is difficult to prevent employees from sitting on stairs because the waiting seats are limited. Gestures and sentences spoken when greeting customers are awkward for familiar customers.

Table 3.4. Bunda Umar Salon Customer Feedbacks after Service

No.	Customer's Name	Age (Years)	Feedback about The Service Quality
1.	Nia Kurniati	49	The services provided are of much higher quality than other salons in Garut
2.	Nida Munadiah	27	On this first visit, she was quite satisfied with the services provided by the employees. But the hairstylist who serves her needs to refine the way she works to make it more comfortable. Therapists also need to provide education about the flow of treatment, this is useful for customers who have just tried treatments at Bunda Umar Salon.
3.	Yani Kristiani	47	From the point of view of service procedures, it is very satisfying, but the employees do not provide clear directions when customers enter the treatment area.
4.	Riska Nurseli	30	The services provided by Bunda Umar's employees are good and quite satisfying, especially with the very well implemented protocol for preventing the transmission of Covid-19.
5.	Tiwi Mulyati	43	The services provided by the employees of Bunda Umar Salon are quite good with all clear procedures.
6.	Heni Setiawati	42	The services provided by the employees of Bunda Umar Salon are already good and very satisfying.

3.3.4 SOP Revision

Based on the SOP Review points, the researcher needs to revise several procedures to make them better suit the conditions in the field. Revisions were made, especially regarding welcoming customers' procedure because it was the most frequently complained about by employees and needed to be adjusted. Other SOP procedures complained by employees but not revised means that they will still be carried out but with a management strategy to prevent employee resistance when the SOP implementation process occurs. The revisions made are described in the table 3.5 below.

Table 3.5. Bunda Umar Salon SOP Draft Revision Point

No.	SOP Name	Revision Point	
		Pre-Revision	Post Revision
1.	<i>“Menunggu Tugas Penanganan”</i> Waiting for Treatmen Duty	<i>“Terapis yang menunggu di ruang perawatan wajib menyambut pelanggan yang lewat di depan mereka. Sambutan dilakukan dengan berdiri, menyilangkan tangan kanan ke atas, menaruh telapak tangan kanan di area dada atas kiri, tersenyum, sedikit membungkukan badan atas, dan mengucapkan “Assalamualaikum, (Ibu/Teteh)”. Setelah pelanggan berlalu, terapis dipersilakan duduk kembali.”</i>	<i>“Terapis yang menunggu di ruang perawatan wajib menyadari keberadaan pelanggan yang lewat di depan mereka dengan menunjukkan senyum sambil sedikit membungkukan badan tanda penghormatan.”</i>
2.	<i>“Menyambut Pelanggan di Ruang Perawatan”</i> Welcoming Customers in the Treatment Room	<i>“Sambil tersenyum mengucapkan kalimat “Assalamualaikum, teteh/ibu (nama pelanggan), saya (nama terapis), terapis yang akan menangan hari ini””</i>	<i>“Sambil tersenyum mengucapkan kalimat “Assalamualaikum, teteh/ibu (nama pelanggan), saya (nama terapis), terapis yang akan menangan hari ini” Apabila terapis sudah mengenal pelanggan yang dilayani, maka cara menyambut dibebaskan sesuai dengan kebiasaan yang dilakukan namun tetap dalam batas kesopanan.”</i>

CHAPTER 4 CONCLUSION AND IMPLEMENTATION PLANS

4.1 Conclusion

Bunda Umar Salon, a salon for Muslim women that has been established in Garut since 2010, plans to expand its business scale by opening other branches in other new locations. Unfortunately, there are still problems with the quality of service where there are no expected quality and service standards in Bunda Umar Salon, and this problem leads to customer dissatisfaction in the form of customer complaints.

The absence of written SOPs was the leading root cause of service quality problems. All Bunda Umar Salon employees provide services based solely on their tacit knowledge of unwritten service procedure. Therefore, the researchers conducted a study to find the best way to design the SOP for Bunda Umar Salon.

Based on observations, interviews, and literature studies that have been carried out to produce a good SOP design, the researcher formulates the solution stages as follows.

a. Determine service critical point

Service critical points are services that are vulnerable to customer complaints if employees do not perform these services properly. The service critical points that are found then become the basis for determining what services are the top priority for the SOP.

b. Knowledge Conversion based on Nonaka's SECI Model

The knowledge conversion process is carried out to convert tacit knowledge into explicit knowledge. Researchers use Nonaka's SECI (Socialization, Externalization, Combination, and Internalization) as the primary theoretical basis. The socialization was carried out by holding discussions with the founder of Bunda Umar Salon and the two most senior employees to collect tacit knowledge on service procedures. The tacit knowledge recorded then goes through the externalization and combination process so that it is finally ready to become material for the SOP design.

c. Design the SOPs

o SOP Writing

Bunda Umar Salon's SOPs are written in a simple step format because almost all of the activities are short routine procedures without the need to make

decisions. Except for SOPs for receiving customer orders made in a flowchart format since the procedure is quite long and requires some decision-making processes.

- SOP Trial

The written SOP is then socialized to all Bunda Umar Salon employees, and its feasibility is tested. The trial was conducted for approximately two weeks to determine whether the SOP was easy for employees to do and resulted in satisfying service for Bunda Umar Salon's customers. After the trial was conducted, it was found that all the customers who were interviewed were satisfied with the service of Bunda Umar Salon.

From the employee's point of view, they all agree that the standard operating procedures written in the SOP are easy to do, but there are still employees who do not carry out procedures according to the SOP. From the employee's point of view, they all agree that the standard operating procedures written in the SOP are easy to do, but there are still employees who do not carry out procedures according to the SOP. This violation indicates an attitude of employee resistance to change, so that management needs to design an implementation plan with the right strategy so that all employees are willing to carry out service procedures according to the SOP.

- SOP Revision

The collected feedback from employees and customers is then used as material to revise the SOP. The SOP was revised so that its contents were more appropriate to conditions in the field.

4.2 Implementation Plan

Based on the description above, the researcher proposed Bunda Umar Salon SOP enforcement implementation plan. The strategy to address employee resistance to change is applied in the plan. The level and quality of communication about the change can affect resistance, so it is essential to ensure that management and employees have a good communication relationship. Erwin & Garman (2009) recommend the management strategy to address employee resistance to change as follows.

- Management needs to gain employees' confidence and trust by demonstrating the ability to lead the organization towards effecting positive change.
- Being collaborative is the most effective management style for influence resistance.
- Providing employees with more information about change initiatives and more opportunities for participation will make employees less resistant and produce positive perceptions of the changes. Select and involve individuals with higher resilience, risk tolerance, and positive self-concept in leading and implementing change initiatives.
- Management needs to ensure employee understanding of the change by providing precise and appropriate details.
- Management needs to ensure that organizational policies, goals, actions, and behaviors are consistent with change initiatives.
- Management needs to provide adequate support and training in building employee confidence and their capabilities to accomplish change.

4.2.1 Bunda Umar Salon SOPs Enforcement Plan

The main objective of the implementation plan is to ensure that the management can ensure that all Bunda Umar Salon employees understand the contents of the SOP and carry out services according to the fixed procedures listed in it. The followings are series of program included in Bunda Umar Salon's SOP enforcement implementation plan proposed by the researcher. Each program has the leading people in charge of (PIC) coming from the management staff of PT. Bunda Umar Sharia Group to ensure the program runs well.

a. Affirmation of The Company's Organizational Structure

A clear organizational structure is a primary basis for the appropriate implementation of SOPs in a company. At Bunda Umar Salon, the existence of SOPs has made several processes flow more formal for employees so that an exact mapping of the people responsible for each procedure regulated in the SOP is required. According to Ahmady et al. (2016), the organizational structure is a way or method by which organizational activities are divided, organized, and coordinated. The organizations created the structures to coordinate the activities of work factors and control the member performance.

Suryaningsum (2008) also stated that organizational structure and supervision's prominent roles are to coordinate employee activities, motivate employees, equip employees with incentives, and change employees' behavior and value characteristics as organizational members. Organizational structure can be a behavior controller since it can shape the way people behave and determine how they act in an organization. Therefore, the board of directors of PT Bunda Umar Sharia Group, as Bunda Umar Salon's owner, needs to reaffirm the existing organizational structure followed by preparing a job desk and clear lines of coordination between people in the organization structure. The board of directors needs to ensure that the existing organizational structure is according to explicit knowledge or documented SOPs. A good organizational structure can encourage the SOP enforcement activity by creating clear lines of communication and reporting.

b. SOP Retraining Program

This program aims to make employees better understand and remember all standard procedures. The retraining program is carried out regularly. In the early days of implementing SOPs, retraining needed to be held more often, but SOP retraining can become an annual program if the employees are already used to it. The retraining program begins with re-submitting material on implementing the SOP, which is essential for all employees. This program can also allow employees and management collaboration to formulate a better SOP implementation strategy. At the end of the program, an exam or evaluation will be held to assess how well employees understand and remember the SOP implementation. This program is the responsibility of the HRD manager of PT. Bunda Umar Sharia Group.

c. SOP Enforcement Supervision

The enforcement of SOPs by all employees during operations must always be supervised to ensure high-quality services. The manager who is responsible for implementing this program is the operational manager of PT. Bunda Umar Sharia Group. At the end of each month, the operational manager needs to report the SOP enforcement. The enforcement report can be used as evaluation material for HRD managers to improve employee performance, both in the next SOP retraining program or monthly employee performance evaluation programs.

d. Employee Performance Evaluation Program

How proper the employees enforce the SOPs needs to be discussed every month in the performance evaluation program. Employees will have room to communicate directly with HRD managers when performance evaluations are carried out. When the HRD manager knows what obstacles or problems cause an employee's resistance to enforce the SOPs properly, the manager can provide adequate support and more information to build employee confidence and capabilities to accomplish change.

e. Employee Reward Program

Employee reward programs need to be done regularly once a month to appreciate employees who have the best performance according to company expectations. One of the best aspects of employee appraisal is the suitability of the services they provide with the standard procedures written in the SOP. The company will select the best employee each month to get the prize. The reward prizes given are in the form of a certificate of appreciation and an additional nominal salary of 10% of the total salary given for the month. This award program is expected to provide more motivation for employees always to work following the SOP.

The programs and activities proposed to be carried out in the implementation plan are briefly shown in the table 4.1 below.

Table 4.1 . Bunda Umar Salon SOPs Enforcement Plan

Program Name	Activity	Frequency	PIC
Affirmation of The Organizational Structure	Creating a division of labor, grouping work, determining hierarchical relationships between parts of the organization, determining coordination mechanism	Annually	Directors (Owner)
SOP Retraining	Presentation of SOP material	Monthly	HRD Manager
	Practical and theoretical exam	Monthly	HRD Manager

Program Name	Activity	Frequency	PIC
SOP Enforcement Supervision	Supervise the employees' SOPs enforcement	Daily	Operational Manager
Employee Performance Evaluation	Personal meetings between managers and employees to discuss the employee's monthly performance	Monthly	HRD Manager
Employee Reward	Give awards to the best employee in the form of certificates and additional salary values	Monthly	HRD Manager

4.2.2 Timeline of Bunda Umar Salon SOPs Enforcement Plan

The affirmation of the organizational structure program will be carried out annually, namely at the end of each year. The SOP retraining program will be held regularly. At the beginning of its implementation, the SOP retraining program will be carried out more often, but it may turn into an annual program held once a year or twice over time. SOP enforcement supervision programs will be carried out daily throughout the year to ensure that SOP implementation runs well and results in high-quality service. Meanwhile, employee performance evaluation and employee reward programs will be conducted every month, each at the end and beginning of each month. The timeline of Bunda Umar Salon's SOP enforcement programs is briefly illustrated in table 4.2.

Table 4.2. Timeline of Bunda Umar Salon SOP Enforcement Implementation Plan

Activity	PIC	2020				2021																															
		Dec				Jan				Feb				Mar				Apr				May				Jun				Jul				Aug			
		1	2	3	4	1	2	3	4	1	2	3	4	1	2	3	4	1	2	3	4	1	2	3	4	1	2	3	4	1	2	3	4				
Affirmation of The Organizational Structure																																					
Create labour division, grouping work	DR

4.3 Recommendation

The SOPs, which contain the best practice fixed procedures for Bunda Umar Salon's services, has proven to bring about a positive change. SOPs make it easier for employees to understand the flow of work and increase their discipline at work. Employees who work according to the SOPs provide satisfying service for customers. This improvement indirectly also provides more benefits for the company. Bunda Umar Salon's financial report shows that there has been an increase in revenue in consecutive from October to December 2020, namely the month when employees start working according to the SOPs. Therefore, management needs to continue to complete SOPs for all service procedures performed at Bunda Umar Salon.

A complete SOP will make it easier for management, especially in training new employees because, as previously stated, PT. Bunda Umar Sharia Group wants to increase the number of Bunda Umar Salon branches in other places so that perhaps employees' recruitment and training process will be carried out more frequently. The SOP that has been made must also be flexible to change. Management needs to always make renewal efforts when necessary, for example, by always doing benchmarking to similar industries, so that the services provided can continue to be able to adapt to the dynamic trend changes.

APPENDIX

APPENDIX A

List of Bunda Umar Salon Customer Complaints from February 2019 – September 2020

No.	Tanggal Keluhan	Keluhan
1.	7 Febuari 2019	Kostumer melakukan perawatan facial dan mengeluhkan terapis mengaplikasikan masker secara tidak rapi. Masker yang diaplikasikan sampai masuk ke dalam mata sehingga menyebabkan mata kostumer hampir sakit.
2.	1 Juni 2019	Kostumer melakukan perawatan facial dan mengeluhkan gerakan tangan terapis ketika melakukan perawatan sangat kasar, wajahnya seperti dipukuli. Kostumer juga merasa terapis tergesa-gesa karena melakukan prosedur penguapan sanget sebentar (kostumer menggunakan istilah 'kilat'), tidak seperti biasanya, suhu uap panasnya juga dirasa agak terlalu panas. Akhirnya kostumer tersebut merasa hasil perawatanya seperti belum melakukan facial sama sekali.
3.	24 May 2019	Kostumer melakukan perawatan hair mask dan potong rambut. Kostumer melihat para terapis saling tunjuk ketika diberikan tugas untuk merawat dia, seperti pada malas bekerja. Akhirnya kostumer disarankan untuk melakukan potong rambut terlebih dahulu. Ketika sedang dipotong rambutnya, ada pegawai yang mengatakan bahwa perawatan hair mask kostumer tersebut dibatalkan karena salon akan tutup jam 17.00, saat itu jam menunjukkan jam 16.14. Pegawai tersebut berdalih terapis yang akan mengerjakan adalah orang jauh sehingga kasihan kalau pulang terlalu sore. Kostumer terpaksa menerima. Rambutnya akhirnya hanya dikeringkan, namun tidak kering karena terapis sangat terburu-buru. Ketika kostumer sedang memakai kerudung, dia mendengar para pegawai membicarakan kostumer tersebut. Mereka mengatakan rambutnya akan sangat sulit diatur. Kostumer mengeluhkan attitude terapis di bagian perawatan rambut kurang baik.
4.	4 Juni 2019	Kostumer melakukan perawatan potong rambut. Sebelum dimulai, kostumer telah menunjukkan kepada terapis model rambut yang diinginkan. Namun terapis malah memotong rambutnya terlalu pendek. Kostumer mengatakan dia sudah

		sering datang ke Salon Bunda Umar namun baru kali ini merasa dirugikan dengan potongan rambut yang salah.
5.	15 Juni 2019	Kostumer melakukan perawatan hair spa cool therapy. Sejak awal, kostumer sudah mengatakan ingin ganti baju dahulu dan memakai kemben karena dia ingin sekalian dipijat punggungnya. Namun terapis yang menangani mengatakan nanti saja ganti kembennya dan sampai akhir ternyata tidak dipersilahkan ganti baju bahkan permintaan untuk pijat punggung juga tidak dipenuhi. Hasilnya baju kostumer basah di bagian punggung. Kostumer merasa terapis terburu-buru padahal biasanya dia merasa pelayanan di Salon Bunda Umar sangat ramah dan apik.
6.	8 September 2020	Kostumer mengeluhkan gerakan tangan terapis ketika melakukan prosedur keramas membuat kostumer merasa perih.
7.	10 September 2020	Beberapa karyawan yg sedang tidak ada pelanggan terdengar tertawa-tertawa cukup keras, kadang terasa mengganggu sehingga terlihat kurang profesional.
